

AUTISM

RESEARCH STUDY

Does your child have a diagnosis of Autism Spectrum Disorder?

Exciting new evidence is linking the gut intestinal flora to brain and behavior changes. A team of investigators from the University of Florida is currently conducting a new research study in North Central Florida to understand how the gut intestinal flora affects the brain and behavior in Autism. Results from this study might improve diagnostic or treatment options. ***We need your help!***

This study will include interview sessions and comprehensive diagnostic and behavioral assessments at no cost.

Who is eligible

- Children diagnosed with Autism Spectrum Disorder
- Between the ages of 3 and 18

Participation includes

- Interview
- Behavioral Assessment
- Urine sample
- Fecal sample
